

April 10, 2012

WE WILL BE UPDATING AND ADDING MATERIAL THROUGHOUT THE DAY ON APRIL 10 SO PLEASE CHECK BACK OFTEN FOR THE LATEST INFORMATION!

Dear Subscriber:

This morning USDA released its April 2012 WASDE report. Here is a look at the key numbers:

THANK YOU

THANKS TO THESE SPONSORS FOR SUPPORTING THE AG E-LETTER

The Andersons, Inc. is a diversified company with interests in the grain, ethanol and plant nutrient sectors of U.S. agriculture, also railcar leasing and repair, industrial products

formulation, turf products production, and general merchandise retailing. Founded in 1947, The Anderson's is celebrating 65 year's of service.

<http://www.andersonsinc.com/>

<http://www.agrigold.com>

In our 9th year as a major corporate underwriter of quality on-air Agricultural Programming at AM-580, **AGRIGOLD** is pleased to provide additional funding for this E-newsletter for the benefit of **AGRIGOLD** customers and other farmers across the country.

W I L L R A D I O
U R B A N A I L L I N O I S

From the March 2012 WASDE Report:

WHEAT: U.S. wheat ending stocks for 2011/12 are projected 32 million bushels lower.

Projected feed and residual use is raised 35 million bushels reflecting higher-than-expected disappearance during the December-February quarter as indicated by the March 1 stocks.

Projected seed use is lowered 3 million bushels based on state level seedings as reported in the March 30 *Prospective Plantings* report.

Projected exports for all

wheat are unchanged as a 15-million-bushel increase for Soft Red Winter (SRW) wheat is offset by the same size reduction for Hard Red Winter wheat. By class shifts reflect the pace of sales and shipments to date and the increasing competitiveness of U.S. SRW wheat into Europe, Egypt, and

Mexico. The projected range for the 2011/12 season average farm price is narrowed 5 cents on both ends to \$7.20 to \$7.40 per bushel.

CORN: U.S. feed grain balance sheets for 2011/12 are unchanged this month. The projected ranges for the season-average corn and sorghum farm prices are both narrowed 10 cents on each end to \$6.00 to \$6.40 per bushel and \$5.90 to \$6.30 per bushel, respectively. The barley and oats farm price ranges are both narrowed 5 cents on each end to \$5.25 to \$5.45 per bushel and \$3.40 to \$3.50 per bushel, respectively.

Corn used to produce ethanol in 2011/12 is projected at 5.0 billion bushels, unchanged again this month. The latest monthly data from the Energy Information Administration (EIA) indicates that average daily ethanol disappearance fell to a 23-month low in January pushing ethanol stocks to a new record high. Weekly EIA ethanol production data suggest average daily ethanol production during February and March has continued to fall hitting its lowest level since early last fall.

Projected 2011/12 corn feed and residual use is unchanged at 4.6 billion bushels. March 1 stocks indicate a September-February feed and residual disappearance 238 million bushels lower than during the first 6 months of the 2010/11 marketing year. Prospects for feed and residual disappearance during the remainder of 2011/12 will be limited by an improving outlook for summer wheat feeding and the potential for 2012 new-crop corn use during August. Prospects remain favorable for a large year-to-year increase in winter wheat production with planted area up 1.1 million acres and crop condition ratings substantially improved from last spring at this time, particularly in the Hard Red Winter wheat states. Larger expected supplies and competitive prices for wheat relative to corn suggest an increase in summer wheat feeding compared with last year. The quick start to corn planting this spring and more intended acres across the South raise the potential for a substantial increase in new-crop corn use before the September 1 start of the new marketing year.

SOYBEANS: U.S. soybean exports for 2011/12 are increased 15 million bushels this month to 1.29 billion. The increase partly offsets reduced export prospects for South America resulting from drought-reduced soybean crops. The U.S. soybean crush is raised 15 million bushels to 1.63 billion due to stronger-than-expected domestic soybean meal disappearance. Soybean oil balance sheet adjustments include increased production, reduced food use, and increased use for methyl ester production reflecting the most recent data published by the Environmental Protection Agency (EPA). Seed use is lowered to reflect plantings for 2012 reported in the March 30 *Prospective*

Plantings report. Residual use is reduced based on indications from the March 30 *Grain Stocks* report. U.S. soybean ending stocks are projected at 250 million bushels, down 25 million from last month.

Soybean and soybean product prices are all projected higher this month. The U.S. season average soybean price range is projected at \$12.00 to \$12.50 per bushel compared with \$11.40 to \$12.60 last month. The soybean meal price is projected at \$335 to \$355 dollars per short ton compared with the previous projection of \$310 to \$340. The soybean oil price is projected at 52.5 to 54.5 cents per pound compared with the previous projection of 50.5 to 54.5 cents per pound.

USDA April 2012 South American Production for 2012 in millions of metric tons (released April 10, 2012, 7:30 a.m. CST)

Crop	USDA April Estimate	Average Guess	Range	USDA March Estimate	USDA 2010/11 Final

Brazil Soybeans	66.00	68.50	75.50	75.50

From the March 2012 WASDE Report:

CORN: Global coarse grain supplies for 2011/12 are projected 4.3 million tons lower mostly on a 4.0-million-ton reduction in corn beginning stocks in China with higher 2010/11 corn feed and residual use. Global barley supplies for 2011/12 are also lowered 0.6 million tons mostly on lower 2010/11 and 2011/12 production for Iran. Partly offsetting is an increase in global sorghum supplies reflecting higher 2010/11 and 2011/12 production in China that more than offsets a 0.5-million-ton reduction in 2011/12 sorghum production for Mexico.

Global 2011/12 corn production is nearly unchanged with a number of notable, but offsetting changes made, many of which reflect the latest available updates to officially reported statistics.

Corn production is raised 1.7 million tons for Egypt, 0.6 million tons for Indonesia, 0.4 million tons for Cambodia, and 0.2 million tons each for Colombia and Thailand. Production for Mexico is lowered 1.5 million tons based on lower harvested area as government harvest reports suggest last summer's crop suffered greater losses than previously thought from late planting, sporadic dryness, and an early frost in eastern areas of the south-central Corn Belt. Production for Argentina is reduced 0.5 million tons with lower yields reported for the early planted crop. South Africa production is lowered 0.5 million tons as dryness and late-season heat that persisted through mid-March reduced yield prospects in western areas of the Corn Belt. The resumption in rainfall in late March came too late for much of the crop. Venezuela production is lowered 0.4 million tons with lower reported area and yields and Laos production is lowered 0.3 million tons on lower reported area.

Global coarse grain imports and exports for 2011/12 are raised slightly with several countries adjusted based largely on the pace of trade to date. A 0.5-million-ton increase for Brazil corn exports is partly offset by a 0.1-million-ton decrease in corn exports for Mexico. Corn imports are lowered for Egypt, Thailand, and Colombia, but raised for Mexico, Indonesia, and Venezuela. Argentina sorghum exports are lowered 0.2 million tons. Sorghum imports are lowered for Japan.

Kazakhstan barley exports are raised 0.2 million tons. Barley imports are raised for Morocco and Iran. Global coarse grain consumption for 2011/12 is lowered 3.4 million tons mostly on a 3.0-million-ton reduction in corn feed and residual use in China. An increase in China wheat feeding is mostly offsetting. Mexico corn feeding is reduced 0.4 million tons, also with higher expected wheat feeding. Corn feeding is raised 0.5 million tons for Indonesia and 0.4 million tons for Egypt. A 0.5-million-ton reduction in Brazil corn feeding is offset by the same size increase in food, seed, and industrial use for the country. Sorghum consumption is raised for China, but lowered for Mexico and Japan. Barley feeding is lowered for Saudi Arabia. Global coarse grain ending stocks for 2011/12 are lowered 0.9 million tons, with a 1.8-million-ton decline for corn partly offset by increases for barley and sorghum.

SOYBEANS: Global oilseed production for 2011/12 is projected at 440.6 million tons, down 5.2 million from last month. Foreign production accounts for all of the change. Brazil soybean production is forecast at 66 million tons, down 2.5 million from last month as warm temperatures and a lack of rainfall since late February in the southern state of Rio Grande do Sul further reduced yield and production prospects. Argentina and Paraguay soybean production estimates also are further reduced this month, reflecting the damaging effects of this year's drought. Other changes include higher peanut and sunflower seed production for Burma, reduced peanut production for Argentina and China, reduced cottonseed production for Australia and India, and reduced palm kernel production for Indonesia.

Global oilseed trade for 2011/12 is projected at 106.4 million tons, down 2 million mainly reflecting reduced soybean trade. Lower soybean exports are forecast for Argentina, Brazil, Paraguay, and Uruguay. Soybean imports are reduced for several countries including Vietnam, Iran, and Mexico. Global soybean ending stocks are projected at 55.5 million tons, down 1.8 million from last month, and down 13.6 million tons from last year.

WHEAT: Global wheat supplies for 2011/12 are lowered 0.5 million tons as reductions in beginning stocks for a number of countries more than offset a 0.3-million-ton increase in global production. Production for 2011/12 is raised for Syria, Pakistan, and South Africa, more than offsetting reductions for Egypt and Iran. Production changes this month have only a limited impact on global trade as world imports rise mostly on higher expected wheat feeding.

Global wheat imports for 2011/12 are projected 1.6 million tons higher. Imports are raised 0.5 million tons for China, 0.3 million tons each for Brazil and Mexico, 0.2 million tons each for Kenya, Morocco, the Philippines, South Africa, and Vietnam, and 0.1 million tons for Israel. Imports are lowered 0.3 million tons for Turkey, and 0.2 million tons each for Iran and Libya. Exports are raised 0.5 million tons each for Argentina and Brazil, 0.4 million tons for Uzbekistan, and 0.3 million tons each for Canada and Pakistan. A 1.0-million-ton reduction for Ukraine and a 0.2-million-reduction for Uruguay are partly offsetting.

Global wheat consumption for 2011/12 is raised 2.8 million tons on higher expected feed and residual usage. Wheat feeding is raised for China, Saudi Arabia, Mexico, the Philippines, and Vietnam. A revision to the India usage series, in order to better reflect residual losses, raises feed and residual use for the country by 2.9 million tons, but reduces food, seed, and industrial use by an offsetting amount. Global ending stocks for 2011/12 are projected 3.3 million tons lower. Stocks are lowered for a number of countries with

the biggest reductions for China, Iran, Argentina, Saudi Arabia, Uzbekistan, Japan, Canada, and Egypt. Partly offsetting are increases for Ukraine, Syria, and Jordan with smaller increases made for several other countries. To see the full April 2012 WASDE report go to:
